

Login Process Documentation

1. Response Summary

During the login process, different system conditions can occur depending on the validity of the user's input and authentication results. Each condition returns a specific **HTTP status code** and **response message**.

1. Username Missing

- **Condition:** The `EncUsername` field is empty or null.
- **HTTP Status Code:** 400 (Bad Request)
- **Response Message:** "Username is required"
- **Meaning:** The user must provide a username; otherwise, the system will not proceed with authentication.

2. Password Missing

- **Condition:** The `EncPassword` field is empty or null.
- **HTTP Status Code:** 400 (Bad Request)
- **Response Message:** "Password is required"
- **Meaning:** The user must provide a password; otherwise, authentication cannot continue.

3. Invalid Login Attempt (Wrong Credentials)

- **Condition:** The authentication service returns `AccessToken = null` and `AccessFailed = true`.
- **HTTP Status Code:** 404 (Not Found)
- **Response Message:** "Invalid login attempt"
- **Meaning:** The credentials entered by the user are incorrect or not found in the system.

4. Access Denied (No Token Generated)

- **Condition:** The authentication service does not generate a token, but failure is not explicitly marked as `true`.
- **HTTP Status Code:** 400 (Bad Request)
- **Response Message:** "Access Denied"
- **Meaning:** The user has been denied access, possibly due to missing permissions or an internal validation issue.

5. Successful Login

- **Condition:** The authentication service returns a valid `AccessToken`.
- **HTTP Status Code:** 200 (OK)
- **Response Message:** "Success" (with access token details in response body)
- **Meaning:** The login attempt is successful, and the user is granted access to the system.

Check Username (Mobile) Process Documentation

1. Response Summary

During the **Check Username (Mobile)** process, different system conditions can occur depending on the validity of the input and the authentication results. Each condition returns a specific **HTTP status code** and **response message**.

1. Username Missing

- **Condition:** The Username field is empty or null.
- **HTTP Status Code:** 400 (Bad Request)
- **Response Message:** "User Id is required"
- **Meaning:** The user must provide a valid username; otherwise, the system will not proceed with validation.

2. Invalid Username / Access Denied

- **Condition:** The authentication service returns `AccessToken = null` and `AccessFailed = true`.
- **HTTP Status Code:** 404 (Not Found)
- **Response Message:** "Access Denied"
- **Meaning:** The username is invalid or the user does not have access permissions.

3. Account Locked

- **Condition:** The authentication service returns `AccessToken = null` and `AccountLockedOut = true`.
- **HTTP Status Code:** 404 (Not Found)
- **Response Message:** "Account has been locked. Please try again after some time."
- **Meaning:** The user's account has been temporarily locked due to multiple failed attempts or security reasons.

4. Record Not Found

- **Condition:** The authentication service returns `AccessToken = null` and no logout or failure flag is set.
- **HTTP Status Code:** 404 (Not Found)
- **Response Message:** "Record not found"
- **Meaning:** The username is not registered or does not exist in the system.

5. Successful Validation

- **Condition:** The authentication service returns a valid `AccessToken`.
- **HTTP Status Code:** 200 (OK)
- **Response Message:** "Success" (with access token details in the response body)

- **Meaning:** The username is valid, and the system issues an access token confirming successful validation.
