

Arivukkarasu M

Chennai, Tamil Nadu

SUMMARY

- Developed end-to-end HR web applications with ASP.NET, .NET, and C#.
- Managed complex SQL CRUD operations and optimized database performance.
- Built interactive UIs with HTML, CSS, and JavaScript, applying validation for data integrity.
- Enhanced HR modules (Leave and attendance, Employee profile, Employee Movement, Notice Board, Policy, Week off, Payroll) with workflows, Export Excel, filters, and export features.
- Debugged and refactored code to ensure scalability and maintainability.

EDUCATION

Year	Course	Mark	Institution
2014	SSLC	91%	Vidyaa vikas Matric Higher Secondary School, Pudukkottai.
2016	HSC	62%	Vidyaa vikas Matric Higher Secondary School, Pudukkottai.
2020	Bachelor of Engineering	6.75	Saveetha engineering college, Chennai.

SKILLSSET

Certifications	Inspireotech Certified in HTML Inspireotech Certified in CSS Inspireotech Certified in ASP.NET Inspireotech Certified in SQL
Interpersonal	Emotional intelligence, Communication, working with team, Ability to understand and learn different technologies easily and with consistency.
Programming Languages & Frameworks	HTML, CSS, JavaScript, C#, ADO.NET, ASP.NET Web Forms, MVC, Windows Application, MSSQL
Tools & Technologies	Microsoft Visual Studio 2022, Microsoft SQL Server, GitHub.
Process	Agile Methodology

Project: Human Resource Management System (HRMS)

Company: Global Best HR & Management Consulting Pvt. Ltd, Chennai

April 2023 – May 2024

Role: Full Stack Dot Net Developer

Duration: 1.2 years

Responsibilities:

- **Full Stack Development:** Designed, developed, and maintained end-to-end web applications using **ASP.NET**, **.NET Framework**, **C#**, **HTML**, **CSS**, and **JavaScript**. Implemented both **front-end** and **back-end** functionalities to build robust HR solutions, ensuring smooth data flow and user-friendly interfaces.
- **CRUD Operations:** Managed **CRUD operations** (Create, Read, Update, Delete) using **ADO.NET** and **Entity Framework** on multiple databases within **MS SQL Server** for modules such as Leave and Attendance, Payroll, and Employee Management.
- **Database Management & Optimization:** Created and optimized **SQL Server stored procedures, functions, views** to ensure efficient database performance. Used **SQL** for writing complex queries, creating database objects, and generating reports for HR management systems.
- **Leave and Attendance Module:** Played a key role in enhancing the Leave and Attendance module by implementing **HR leave policy workflows, leave approval processes**, and designing UI components with **dynamic filters** using **JavaScript** and **AJAX** for real-time data updates.
- **Front-End Development & Validation:** Built interactive user interfaces using **HTML5**, **CSS3**, **JavaScript**, Applied front-end validations and input filters to ensure data integrity and improve user experience across different modules, including Employee Movement and Payroll Summary.
- **ASP.NET Web Forms:** Developed and enhanced features within **ASP.NET Web Forms** for HR modules.
- **Employee Movement & Payroll Modules:** Implemented enhancements to the Employee Movement module using **SQL Server** and **stored procedures** to manage employee transfer requests, approvals, and data validations. Improved the Payroll module by adding filters for branch-specific summaries, automated LOP (Loss of Pay) processes, and exporting data to Excel.
- **Bug Fixing & Code Refactoring:** Debugged and resolved issues related to **data consistency, dropdowns, form validation, and grid views**. Refactored legacy code to improve performance and maintainability across multiple modules, including Global Configuration (Branch, State, Department) and Employee Engagement.
- **Global Configuration Enhancements:** Enhanced modules like **Branch, Department, Country, and State Management** by implementing filters, fixing dropdown selection issues, and ensuring data integrity with SQL-based validation logic.
- **Professional Ethics & Continuous Learning:** Committed to following best coding practices and adhering to professional standards, ensuring the quality and scalability of the code base. Continuously upskilled by staying updated with the latest technologies in **.NET**, **SQL**, and web development.

Project: Car Rental System

Institution: Kaashiv infotech

Role: Full Stack Dot Net Developer

Duration: 6 Months (Intern)

Languages Known: HTML, CSS, .Net, SQL

Responsibilities:

- During my .NET internship I developed a mini-project titled "Car Rental System" using ASP.NET Windows Application. This project aimed to streamline car rental operations, providing customers with flexible options to rent cars on a daily, weekly, or hourly basis.
 - **Cars Module** - Maintained the database of available cars, including details like make, model, availability, and rental rates
 - **Customers Module** - Managed customer information, such as contact details, license information, and rental history
 - **User Module** - Managed user roles, access rights.
-
